

Some of my projects:

1. [online.mathenoid.com](https://online.mathenoid.com)

An online market for but not limited to clothes.

It integrates various features to enable view, see related, add to cart and checkout, for the customers and add new products, remove products and see orders.

It has three parts; the admin, the customer and the backend part.

Developed using REACT JS, MONGO DB/ MYSQL and EXPRESS JS.

Due to customer privacy, the URL points to a masterpiece template and not the live websites.

2. [admin.mathenoid.com](https://admin.mathenoid.com)

[member.mathenoid.com](https://member.mathenoid.com)

*username: admin*

*password: admin*

A chama management system for a self-help group.

The system automates the processes and keeps track of progress.

Contributions are simplified by use of payments integrations and transparency.

Chama's lending power is automatically calculated and used to determine the loans applications processing.

automatic reminders and notifications are provided.

The system is in use and the hereby provided is a snapshot of the system.

Developed using REACT JS, MYSQL and EXPRESS JS.

- 3. [landlord.mathenoid.com](http://landlord.mathenoid.com)  
[tenant.mathenoid.com](http://tenant.mathenoid.com)  
[caretaker.mathenoid.com](http://caretaker.mathenoid.com)

The above is a three-tier house management system with a wide scope of specs for a seamless rental management. Payments are integrated and transparency in transactions with a good record is achieved. The system here is a demo due to customer protection and the complete system is in use by various clients.

Developed using REACT JS, MYSQL and EXPRESS JS.
